Presented To:

NAZMUL ALAM DIPTO

Introduction

The concept of dating has changed massively over the years and become more widely accepted all over the world. With the advancement of technology and the internet, online amenities that facilitate and tend to people's dating demands and also cater to different individuals' preferences have been on the rise, and have been massive successes as well. Although there are many successful dating applications such as Tinder, Bumble, etc, there are a lot of niche areas that these applications do not specifically cater to. The purpose of this dating website is to facilitate dating within and/or with NSU students. This means that people and/or students from other universities will also be allowed to use this website; however, this website predominantly caters to NSU students as many students find it more satisfying to spend time with people from the same institution.

Motto

For NSUers, by NSUers

Objectives

- To get to know and meet with likeminded people “within” NSU
- To get to know and meet with likeminded people “from” NSU

Target Customers

- NSU students looking to meet other NSU students with the objective of dating
- Students from outside NSU looking to meet NSU students with the objective of dating

Web Application Features

- Filtering options such as height, age, interests, etc.
- Special filtering options such as same courses, same year, same semester, and same majors/departments
- Instant chatting
- Being able to match/unmatch according to preference

Tools and Resources

- React
- MySQL
- PHP

Challenge

Considering the website is predominantly for NSU students, the possible challenge in this case could be having an existing pool of NSU students as users during the early stage of the website, as it could take a bit of time for the website to gain credibility as a unique platform.
